1. Title

2. Overview

2.1. Goals

2.2. Non-goals

3. Solution Overview

3.1. Specification

Describe detailed technical specifications. Specs should be detailed enough to allow implementation

3.1.1. Architectural changes

Architecture diagram with a concise description of different components.

3.1.2. API changes

(mention new APIs or interfaces introduced, payload, etc)

3.1.3. Data/schema changes

(mention any new data models, attributes, and their relation with the existing models).

3.1.4. Breaking changes

3.1.5. Action Plan

brief description of different tasks/actions required to reach the goal. Also, if possible, a high-level overview using flow diagrams would be good.

3.2. Rationale

Mention what motivated the specific design and why particular design decisions were made.

3.3. Tradeoffs

Mention are some of the trade-offs or drawbacks which come with your proposed solution and why should we be fine with those tradeoffs

3.3.1. Challenges and Open Questions

4. Dependencies/blockers/known issues

5. Alternate solutions

Mention possible alternate solutions and why those solutions won't be a good fit for now.

6. Production readiness

6.1. Scalability and Fault tolerance

6.2. Security considerations

6.3. Deployment strategy

7. Test Plan

8. Impact Analysis

Impact analysis evaluates the potential effects of proposed changes on existing systems, processes, and stakeholders. This analysis is crucial for identifying risks, ensuring resource alignment, and facilitating informed decision-making.

9. Useful Links/References

10. Related tickets/issues
